

How to Code for N2c Infection Control During COVID-19

8 April 2020

(Item NC2 in HC 9.1 US and Canadian Editions, Item O2c for LTCF US and Australian Editions)

Q: How do you code infection control N2c if a person is not unwell but is in isolation as a COVID-19 response?

A: Code 0 not ordered and did not occur.

The intent of the item is to review prescribed treatments for the person. In this instance the person is not receiving treatment for a condition they have, they are being protected from conditions that others have.
